

# SPRINT 1

Sprint 1 focuses on allowing users to get local data from beacons on their devices.

## IoT device - Raspberry Pi 3B+

```
import time
import random
import paho.mqtt.client as mqtt
import json

#from w1thermsensor import W1ThermSensor
#sensor = W1ThermSensor()
#def Temp():
#    #return temperature = sensor.get_temperature()

#The above lines of code would be used when getting temperature data from
a DS18B20 sensor.

#Due to hardware limitations we are simulating values using random
function.
```

```

def Temp():
    return random.randint(0,99);

ORG = "csgusn"
DEVICE_TYPE = "RPI"
TOKEN = "1123581321"
DEVICE_ID = "3c7c3f5b666d" #Credentials of device as per created on IBM
IoT platform.

server = ORG + ".messaging.internetofthings.ibmcloud.com";
pubTopic1 = "iot-2/evt/status1/fmt/json"; #event named status 1 in JSON
format

authMethod = "use-token-auth";
token = TOKEN;
clientId = "d:" + ORG + ":" + DEVICE_TYPE + ":" + DEVICE_ID;

mqttc = mqtt.Client(client_id=clientId)
mqttc.username_pw_set(authMethod, token)
mqttc.connect(server, 1883, 60) #Connecting using MQ Telemetry
Transport Protocol

while True:

    tempDict = { "d": {"temperature": Temp()} }; #Temporary storage in
a dictionary

    tempJson = json.dumps(tempDict); #Conversion from dictionary to
JSON

    mqttc.publish(pubTopic1, tempJson) #Publish payload
    print("Reading Taken");

    time.sleep(5);

```

## IBM IoT Platform

The screenshot shows the IBM IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A 'Delete' button is visible on the left. The main content area displays a table with columns: Device ID, Status, Device Type, Class ID, Date Added, and Descriptive Location. The first row shows a device with ID '3c7c3f5b666d', Status 'Disconnected', Device Type 'RPI', Class ID 'Device', and Date Added 'Nov 17, 2022 8:17 PM'. Below the table, there is a section for 'Identity' and 'Device Information'. The 'Device Information' section shows details for the selected device: Device ID '3c7c3f5b666d', Device Type 'RPI', Date Added 'Nov 17, 2022 8:17 PM', Added By 'ryanryjah.23cs@licet.ac.in', and Connection Status 'Disconnected'. The 'Connection Status' section provides additional details: Last Connected: Nov 19, 2022 5:22 AM, Client Address: 49.204.113.93 Insecure, Duration: 22 minutes, and Data Transferred: 53.3 KB.

Device ID	Status	Device Type	Class ID	Date Added	Descriptive Location
3c7c3f5b666d	Disconnected	RPI	Device	Nov 17, 2022 8:17 PM	

**Identity** **Device Information** **Recent Events** **State** **Logs**

**Device ID** 3c7c3f5b666d

**Device Type** RPI

**Date Added** Nov 17, 2022 8:17 PM

**Added By** ryanryjah.23cs@licet.ac.in

**Connection Status** **Disconnected**  
Last Connected: Nov 19, 2022 5:22 AM  
Client Address: 49.204.113.93 Insecure  
Duration: 22 minutes  
Data Transferred: 53.3 KB

The device as created in IBM watson platform. On running the program, Status changes to Connected and published temperature data is shown in recent events.

The screenshot shows the IBM IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A 'Delete' button is visible on the left. The main content area displays a table with columns: Device ID, Status, Device Type, Class ID, Date Added, and Descriptive Location. The first row shows a device with ID '3c7c3f5b666d', Status 'Connected', Device Type 'RPI', Class ID 'Device', and Date Added 'Nov 17, 2022 8:17 PM'. Below the table, there is a section for 'Identity' and 'Device Information'. The 'Recent Events' section shows a list of events: status1, {"d":{"temperature":42}}, json, a few seconds ago. The 'Recent Events' section also shows a list of events: status1, {"d":{"temperature":32}}, json, a few seconds ago. The 'Recent Events' section also shows a list of events: status1, {"d":{"temperature":64}}, json, a few seconds ago. The 'Recent Events' section also shows a list of events: status1, {"d":{"temperature":45}}, json, a few seconds ago. The 'Recent Events' section also shows a list of events: status1, {"d":{"temperature":70}}, json, a few seconds ago.

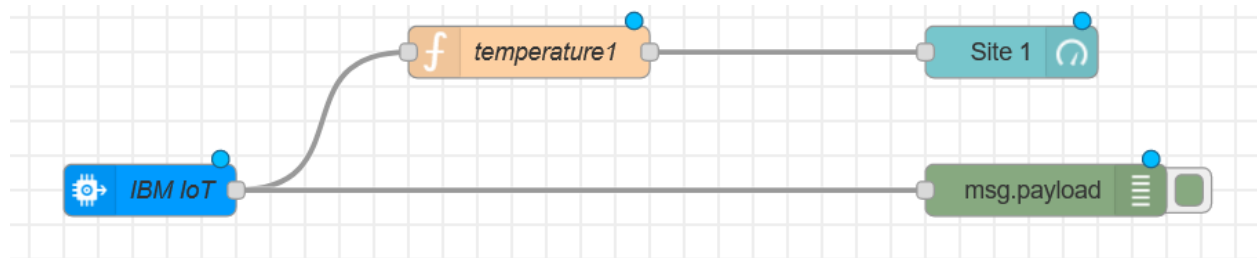

Device ID	Status	Device Type	Class ID	Date Added	Descriptive Location
3c7c3f5b666d	Connected	RPI	Device	Nov 17, 2022 8:17 PM	

**Identity** **Device Information** **Recent Events** **State** **Logs**

The recent events listed show the live stream of data that is coming and going from this device.

Event	Value	Format	Last Received
status1	{"d":{"temperature":42}}	json	a few seconds ago
status1	{"d":{"temperature":32}}	json	a few seconds ago
status1	{"d":{"temperature":64}}	json	a few seconds ago
status1	{"d":{"temperature":45}}	json	a few seconds ago
status1	{"d":{"temperature":70}}	json	a few seconds ago

## Node-RED

1. IBM IoT IN node allows us to get data from IBM IoT device.
2. Temperature is a function that extracts the payload.  
`global.set("temperature1",msg.payload.d.temperature1)`  
`msg.payload=msg.payload.d.temperature1`  
`return msg;`
3. Site is a gauge to view values on the Node-RED dashboard.

4. msg.payload allows for debugging.

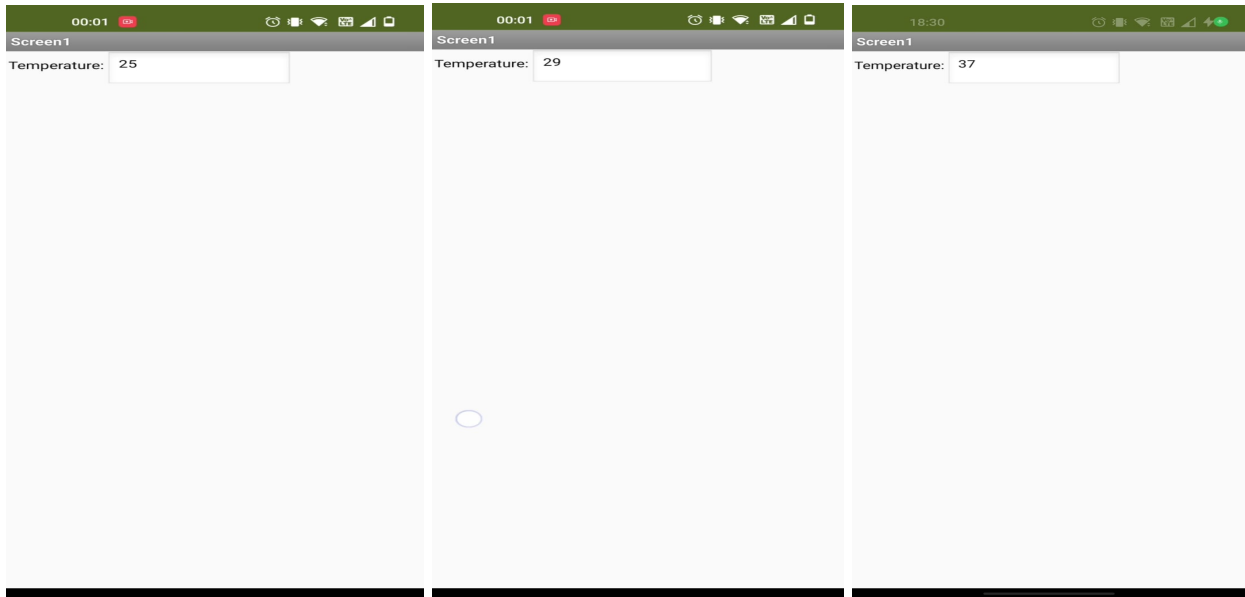

5. [get]/data is a GET HTTP method which sends the json data through the http node.

```
{
  "d": {
    "temperature": 42
  }
}
```

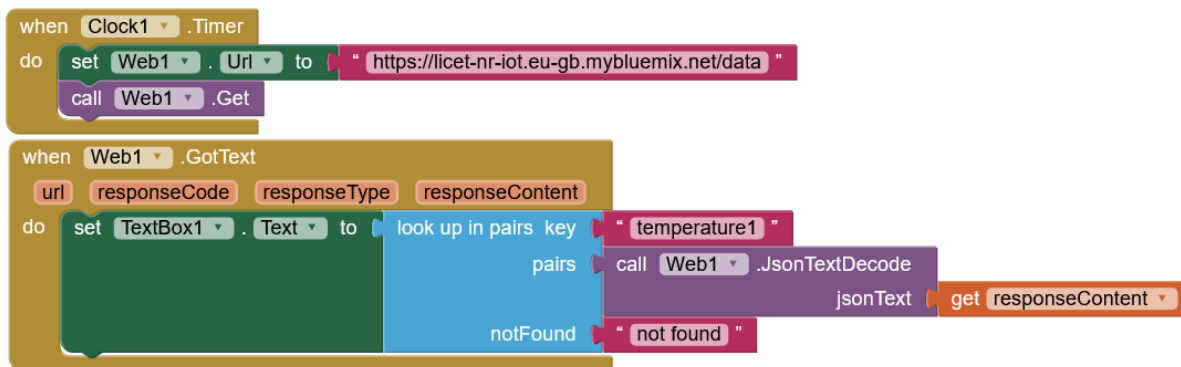

6. This allows us to export the data through HTTP for use by other applications.

## User Device

Employee user interface is an Android Application.

## MIT App Inventor

The app fetches the JSON data from the HTTP out from Node-RED, extracts the relevant data and pastes it in a text box.
